

San Diego factory

5th GENERATION OF CPV MODULES TO BE MANUFACTURED IN SAN DIEGO

Soitec CX-M500 module

28 kW_p Soitec system

New product delivers **higher efficiency** and **lower cost of electricity**

Soitec will be producing in San Diego its fifth generation of concentrator photovoltaic (CPV) modules with enhanced features and performance characteristics specifically designed to benefit large-scale utility power plants.

Soitec's new fifth generation modules are generating more than 2 kW of peak power each and are created for the new tracker configuration of 100 square meters.

While employing the same proven, reliable materials as the previous generation, the new system's configuration improves upon Soitec's previous CPV products, boosting energy-generating efficiencies as high as 30 percent by introducing evolutionary improvements to Soitec's Concentrix™ technology.
